GOEL DENTAL CARE · MALVIYA NAGAR · IMPLEMENTATION BLUEPRINT

After you pay for the website, exactly what gets built, connected, tracked, tested, deployed and monitored.

A visual map of the full system: website, WordPress, WhatsApp, booking, GA4, Tag Manager, SEO, Google and Apple Maps, speed, QA, launch and monitoring. Shown against a system already running at Elites Dental Care, Bengaluru.

26
IMPLEMENTATION STEPS

1
WEBSITE IN SCOPE: GOELDENTALCARE.COM

Live
REFERENCE SYSTEM: ELITESDENTAL.COM

Daniel Deepak
Performance marketing & growth · 10 Nov 2026

02 THE SHORT ANSWER

Six things happen after the website is approved.

QUESTION THIS PAGE ANSWERS

What exactly will you do after building the pages?

Build

- WordPress website, 16+ pages
- Treatment & doctor pages
- Mobile sticky Call · WhatsApp · Book
- Booking page
- Forms with consent

Connect

- WhatsApp (tracked)
- Booking system
- Google Business Profile
- Apple Business Connect
- Search Console
- CRM / lead sheet

Track

- Google Tag Manager
- GA4 events + key events
- Google Ads conversions
- UTM + click IDs on every lead
- Enquiry reference code

Test

- Mobile + desktop
- Every button and form
- Every tracking event
- PageSpeed + Core Web Vitals
- Schema + SEO

Deploy

- Staging site first
- Domain + SSL
- 301 redirects from old pages
- Sitemap to Google
- Backups on

Monitor

- Tracking health
- Search Console errors
- Speed after changes
- Leads vs bookings
- Monthly report

The pages are one part. The rest of this document shows each of the other parts with a diagram, a real example from a clinic system already running, and what changes for Goel Dental Care.

03 HOW TO READ THIS

Labels used on every page.

LABEL	MEANING
EXISTING	Already in place today (at Goel, or at Elites where stated)
VERIFIED	Checked directly on 9–10 Nov 2026
REQUIRED	Needed for the system to work
RECOMMENDED	Strongly advised; can be phased
OPTIONAL	Add later if useful
PROPOSED	Planned for Goel; not built yet
CLIENT INPUT	Needs a decision or information from the clinic

QUESTION THIS PAGE ANSWERS

What is already real, and what is proposed?

EXISTING

Reference project: Elites Dental Care, Bengaluru

elitesdental.com · TC Palya. A WordPress dental website plus a marketing dashboard and CRM that I built and run. Every Elites screenshot here is real, captured 10 Nov 2026. Business figures and patient names are **blurred**, because they belong to that clinic.

PROPOSED

This project: Goel Dental Care

goeldentalcare.com · Malviya Nagar. One website only. Prototype already on GitHub. Everything else here is the plan, labelled PROPOSED.

What this document does not do

It does not promise rankings, leads, revenue or a PageSpeed score. It shows what is built and how each result gets measured.

04 STARTING POINT

Where the website is today, and the prototype already built.

QUESTION THIS PAGE ANSWERS

What is wrong with the current site, and what has been built so far?

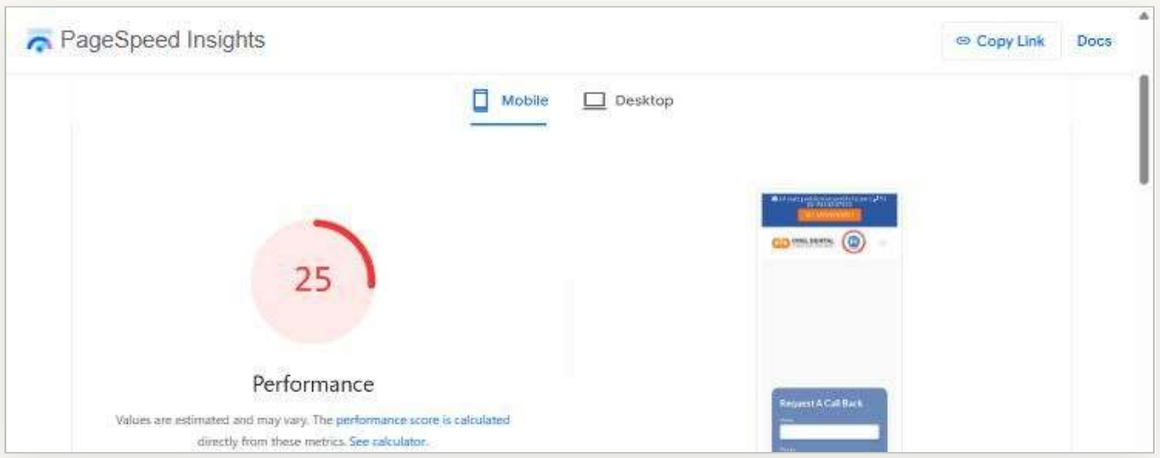

EXISTING **goeldentalcare.com today**

Desktop

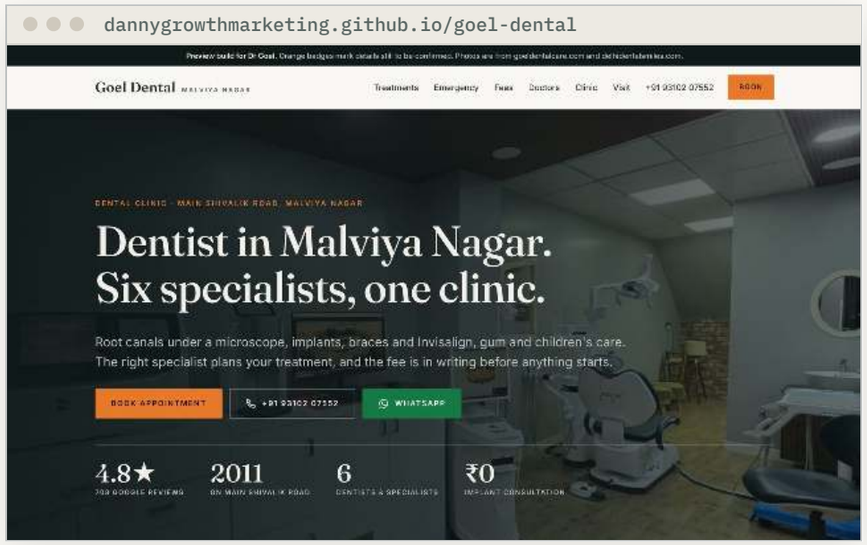

Mobile

Google PageSpeed, mobile, 10 Nov 2026: Performance 25. Content appears after 15 s; largest image after 18.6 s.

EXISTING **Prototype on GitHub (preview only)**

Desktop

Mobile

CHECKED 9–10 NOV	TODAY	PROTOTYPE
WhatsApp button	None	Every page
Sticky mobile Call / WhatsApp / Book	No	Yes
Google Tag Manager	No	dataLayer ready
GA4 tags	2 different IDs	1 (planned)
Images missing alt text	28 of 30	0
Ads conversions recording	0 of 19	Events built in

05 ARCHITECTURE · ACTUAL

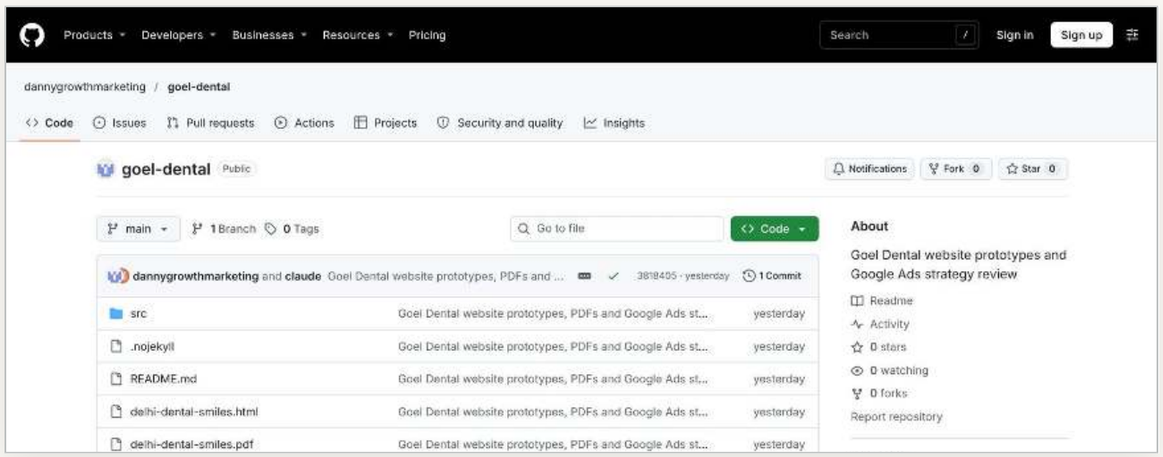

What actually exists today.

QUESTION THIS PAGE ANSWERS

What is the real setup right now, not an assumed one?

Prototype (built)

GitHub repository	dannygrowthmarketing/goel-dental
Code	Self-contained HTML + CSS + JS · Python build
GitHub Pages	Free static hosting · auto-deploys from main
Preview URL	dannygrowthmarketing.github.io/goel-dental

The repository, 10 Nov 2026. Public, noindex, so the preview never competes with the live site on Google.

Live clinic website (today)

goeldentalcare.com	Custom HTML pages (~60)
Hosting	Provider not yet confirmed
Tracking	2 GA4 IDs + Google Ads tag; no GTM; no Meta Pixel
Google Ads account	598-498-3497 · paused · ₹29,297 overdue

Not connected today: Tag Manager, WhatsApp, a booking system, a CRM, Search Console access, call tracking. 0 of 19 Google Ads conversion actions are recording.

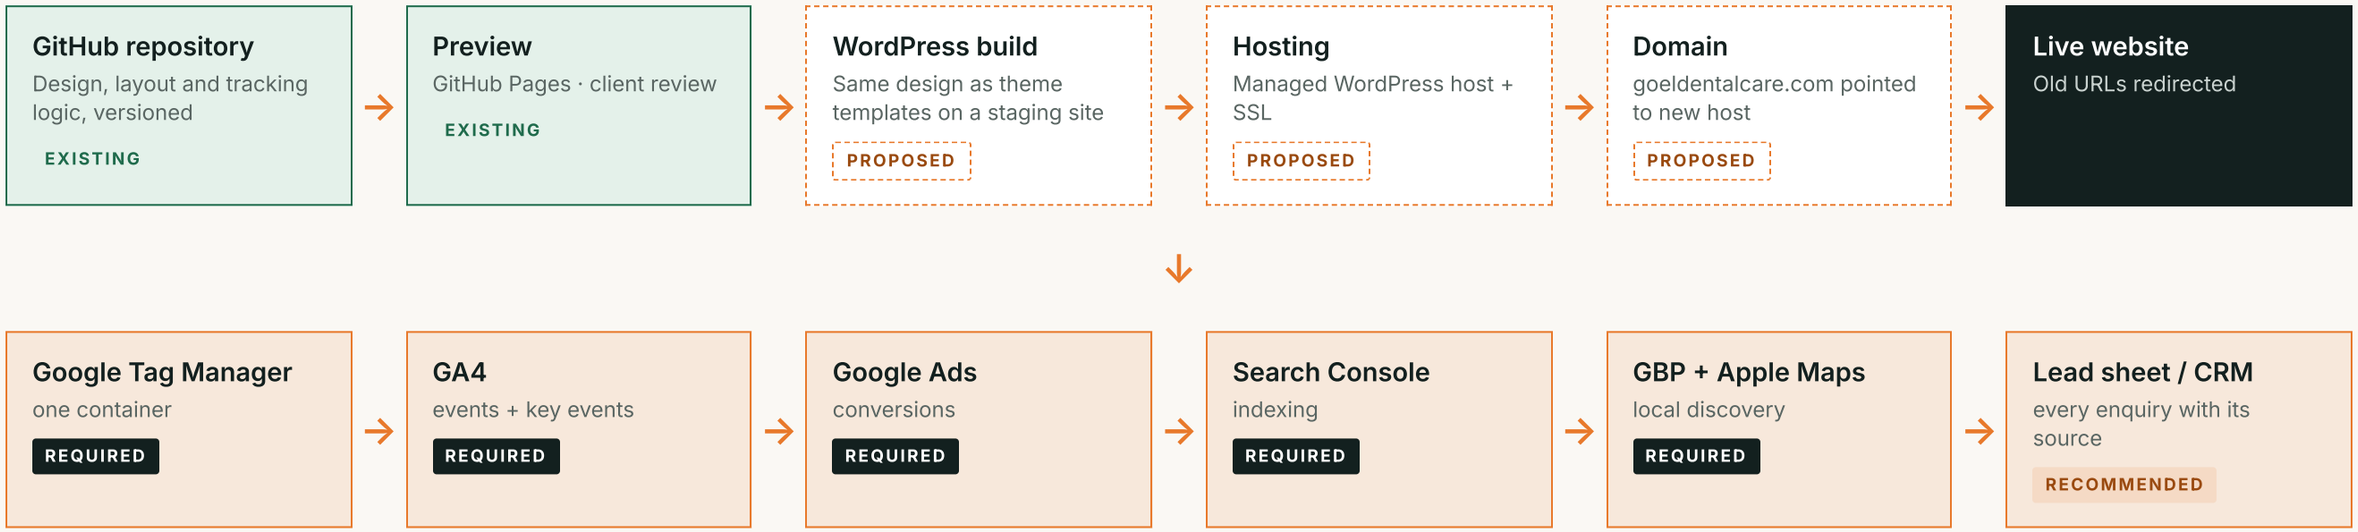

Not used: Firebase, Vercel or any API backend for this site. Nothing in this plan requires them.

CLIENT INPUT — Current host login, domain registrar, Search Console and GBP owner access.

From GitHub prototype to the live, measured website.

QUESTION THIS PAGE ANSWERS

How does the prototype become the real website?

Why WordPress

The clinic can edit text, prices, doctors and blog posts without a developer. Forms, booking and SEO tools plug in. Elites runs the same way.

Why keep GitHub

The design and tracking code stay versioned. Any change can be reviewed or rolled back.

What stays the same

Phone number (once chosen), address, Google reviews and the domain. Patients notice a faster site, nothing else.

07 ROADMAP

26 steps, from plan to ongoing growth.

QUESTION THIS PAGE ANSWERS

What is the full sequence of work?

Plan · Build · Connect · Measure · Discover · Prove · Grow

01 **Planning** STARTED	02 **UX / page architecture** STARTED	03 **Website development** STARTED	04 **GitHub / version control** STARTED	05 **WordPress setup**	06 **Plugins**	07 **WhatsApp**	08 **Chatbot**	09 **Appointment booking**
10 **Forms**	11 **GA4**	12 **Google Tag Manager**	13 **Event tracking**	14 **Conversion tracking**	15 **Search Console**	16 **Technical SEO**	17 **Schema**	18 **Google Business Profile**
19 **Apple Business Connect**	20 **Page speed**	21 **Core Web Vitals**	22 **QA**	23 **Deployment**	24 **Launch**	25 **Post-launch monitoring**	26 **Marketing optimisation**	

EXISTING

Steps 01–04: started

Audit, competitor research, page architecture and the GitHub prototype are already done.

PROPOSED

Steps 05–24: the website project

WordPress build, connections, tracking, SEO, local listings, speed, QA, launch.

PROPOSED

Steps 25–26: ongoing

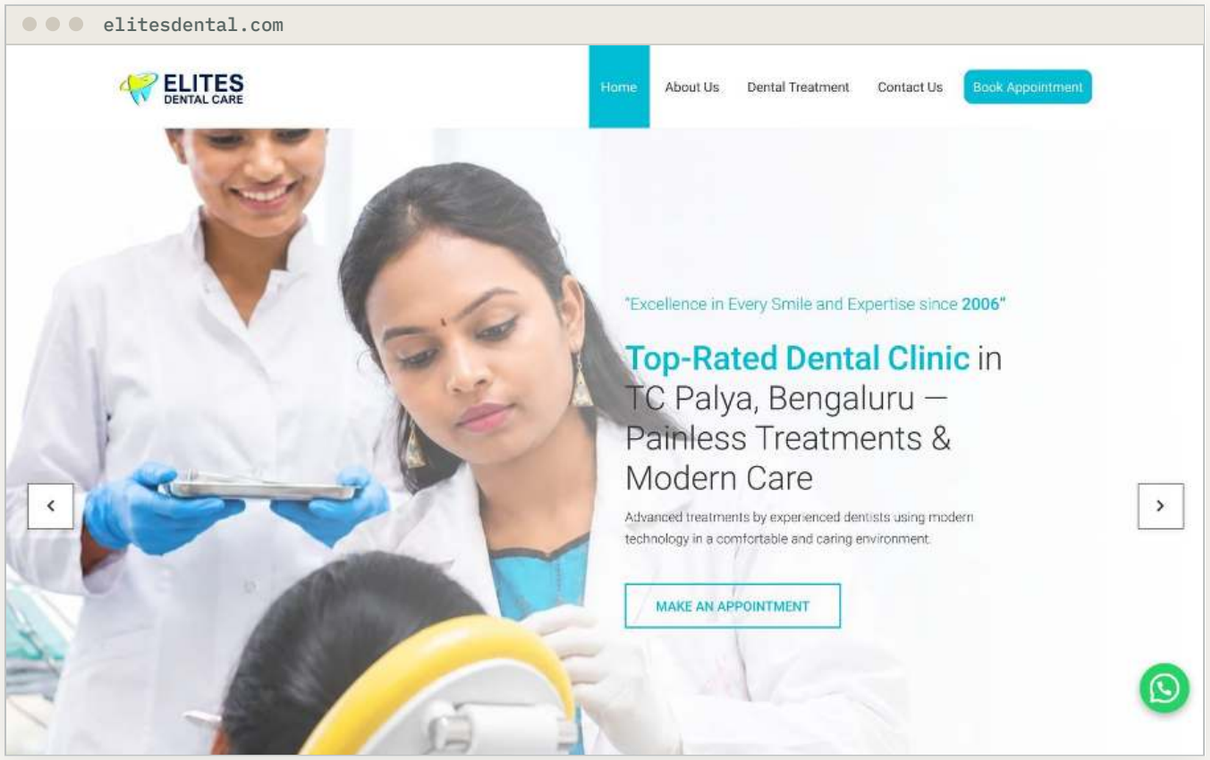

Monitoring and marketing optimisation continue after launch. Priced separately from the website.

08 REFERENCE PROJECT

Elites Dental Care: the same kind of system, already live.

QUESTION THIS PAGE ANSWERS

Has this been done before, for a real clinic?

elitesdental.com, desktop, 10 Nov 2026

Mobile: WhatsApp bubble + sticky Call / Book bar

LAYER	AT ELITES (VERIFIED)
CMS	WordPress + Elementor Pro
Hosting	Hostinger (Hostinger plugins installed)
WhatsApp	Joinchat plugin
Booking	Click4Appointment widget
SEO	Yoast SEO + custom schema
Analytics	GA4 via Site Kit + Microsoft Clarity
Ads tracking	Google Ads tag + click conversions
Speed	LiteSpeed Cache + Smush
Custom code	WPCode snippets
CRM	Supabase dashboard (built by me)

Not identical to Goel: different city, team and site. It shows the parts work together in a real clinic.

One WordPress site, twelve working parts.

QUESTION THIS PAGE ANSWERS

What is inside the WordPress website?

WordPress

goeldentalcare.com

PROPOSED

Website pages	Home, 10 treatment pages, doctors, fees, contact, booking	REQUIRED
Forms	Call-back + contact, 2 fields, consent	REQUIRED
Appointment booking	System to be selected (p. 18)	REQUIRED
WhatsApp	Floating button + inline CTAs	REQUIRED
Chatbot	FAQ + hand-off to WhatsApp	OPTIONAL
SEO	Titles, meta, sitemap, redirects	REQUIRED
Schema	Dentist, MedicalProcedure, Breadcrumb	REQUIRED
Analytics	GTM container → GA4, Ads	REQUIRED
Performance	Cache, image compression, CDN	REQUIRED
Security	SSL, firewall, login protection	REQUIRED
Backup	Daily off-site backups	REQUIRED
Integrations / APIs	Lead relay to CRM / sheet	RECOMMENDED

Every plugin, why it's there, and what it costs.

QUESTION THIS PAGE ANSWERS

Which plugins are required?

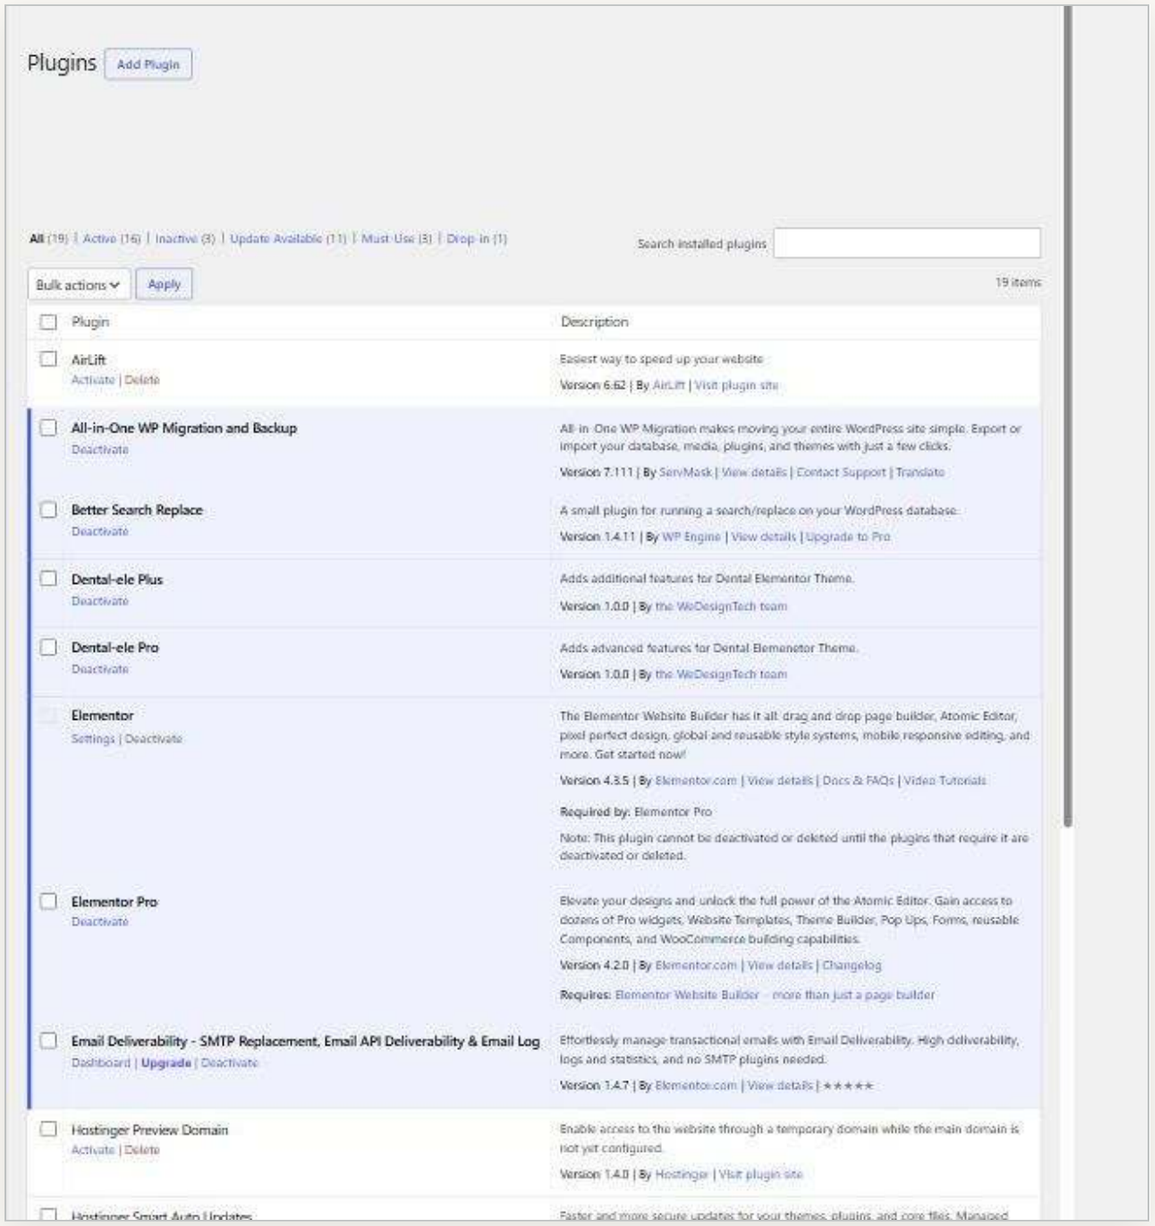

REQUIREMENT	TOOL / PLUGIN	PURPOSE	IMPLEMENTATION	TRACKING	THIRD-PARTY COST	STATUS
Page builder / theme	Elementor Pro + theme *(as at Elites)*, or block theme	Edit pages without code	Build templates from the prototype	—	Paid licence · price to confirm	RECOMMENDED
Forms	Elementor Pro Forms *(Elites)*	Call-back and contact forms	2 fields + consent + hidden source fields	form_start, form_submit	Included in Elementor Pro	REQUIRED
WhatsApp	Joinchat *(Elites)*	Floating WhatsApp button + message	Prefilled text with treatment + ref code	whatsapp_click	Free; premium optional	REQUIRED
Booking	Plugin to be selected based on final functional requirements	Online appointment requests	See booking options, p. 18	booking_* events	Subscription possible · to confirm	REQUIRED
Chatbot	Plugin to be selected based on final functional requirements	Answer common questions, hand off to WhatsApp	FAQ flows only, no medical advice	chatbot_open, chatbot_handoff	To confirm	OPTIONAL
SEO	Yoast SEO *(Elites)*	Titles, meta, sitemap, breadcrumbs	Per-page SEO from the prototype	—	Free	REQUIRED
Code snippets	WPCode *(Elites)*	Schema, tracking glue, small fixes	Versioned snippets, named by purpose	—	Free	REQUIRED
Tag Manager	GTM container (snippet via WPCode)	One place for all tags	GA4 + Ads + future Meta	All events	Free	REQUIRED
Google tools	Site Kit by Google *(Elites)*	Search Console + GA4 inside WordPress	Verification + reports	—	Free	RECOMMENDED
Cache / speed	LiteSpeed Cache *(Elites, needs LiteSpeed host)*	Page cache, CSS/JS optimisation	Matched to the chosen host	—	Free	REQUIRED
Images	Smush *(Elites)*	Compress + WebP + lazy load	All clinic photos	—	Free; Pro optional	REQUIRED
Email delivery	Email Deliverability (SMTP) *(Elites)*	Form emails reach the inbox	Clinic email + backup	—	Free	REQUIRED
Backup / migration	All-in-One WP Migration *(Elites)* or host backups	Backup and restore	Daily off-site	—	Free / paid · to confirm	REQUIRED
Security	Plugin to be selected based on final functional requirements	Firewall, login limits	Host + plugin	—	To confirm	REQUIRED
Behaviour analytics	Microsoft Clarity *(Elites, via WPCode)*	Heatmaps, recordings, strict masking	Masked forms	—	Free	OPTIONAL

Names marked *(Elites)* are confirmed active on elitesdental.com, 10 Nov 2026. No prices are given; each is confirmed when selected.

The plugin list running at Elites today.

QUESTION THIS PAGE ANSWERS

Is this plugin list theoretical?

WordPress → Plugins at elitesdental.com, 10 Nov 2026. 19 installed, 16 active.

Elites Dental Care · live
19 plugins installed; 16 active
EXISTING

→

What this demonstrates
Every capability in this plan exists as a maintained plugin

→

Goel Dental Care
Same categories; fewer plugins
PROPOSED

→

Technical connection
Plugin → feature → tracked event → report

LESSON FROM ELITES	APPLIED TO GOEL
Theme came with 2 extra theme plugins + an addon pack	Avoid theme bundles; fewer plugins to load
Inactive plugins left installed (AirLift, 2 Hostinger tools)	Delete anything inactive at launch
Tracking built as named WPCode snippets	Same: one snippet per purpose, plus GTM
Performance on mobile: 37 (p. 35)	Speed budget set before plugins are added

12 PLUGIN PERFORMANCE

Every plugin costs speed. Each one is checked first.

QUESTION THIS PAGE ANSWERS

How do you stop the site getting slow?

Plugin = **Functionality** (Forms, WhatsApp, booking, SEO) + **Performance cost** (Scripts, CSS, requests, database queries)

01 · Necessity

Does a plugin do something the theme or a 10-line snippet can't?

02 · Security

Maintained, recent updates, known author

03 · Compatibility

Works with the WordPress + PHP version and other plugins

04 · Performance

Extra scripts, CSS, database load. Tested with PageSpeed before and after

05 · Updates

Auto-update policy decided per plugin

06 · Maintenance

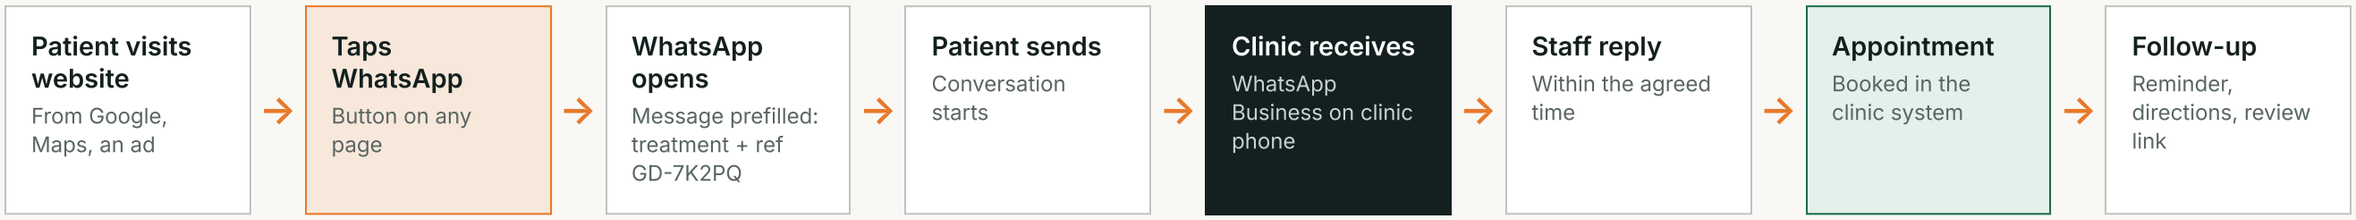

Who owns it, licence renewal date, what breaks if removed

Rule for Goel: no plugin is added without a reason on the plugin table (p. 10), and PageSpeed is re-run after each addition.

What happens when someone taps WhatsApp.

QUESTION THIS PAGE ANSWERS

What happens when someone clicks WhatsApp?

The prefilled message (proposed)

Hi Goel Dental, I'd like to book for **Root canal treatment**. (Ref **GD-7K2PQ**)

The reference code is created on the website visit. Staff note it in the lead sheet, so the chat can be matched back to the ad or search that brought the patient.

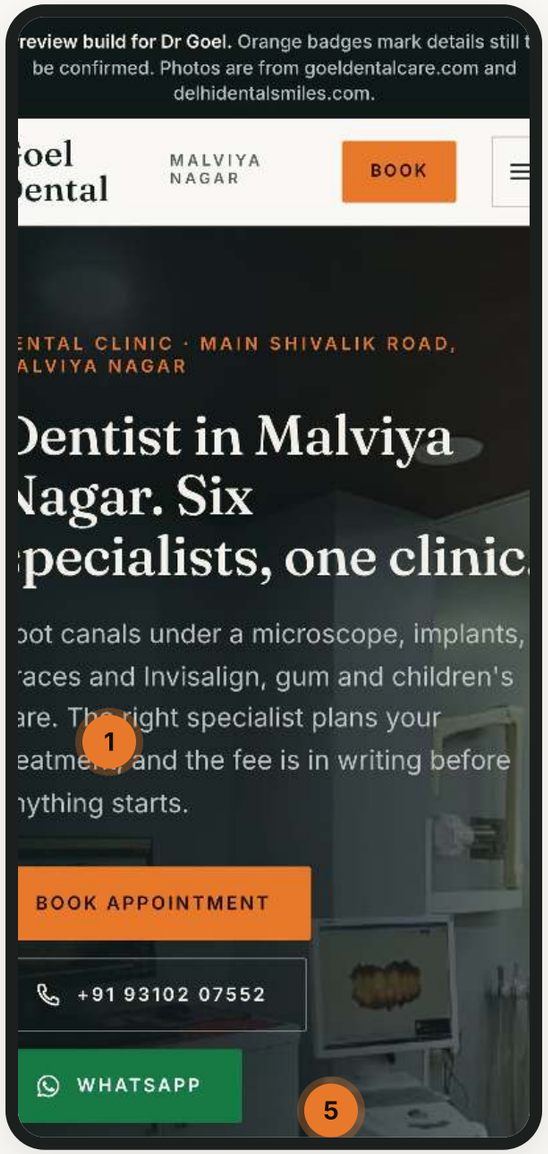

What is needed

ITEM	STATUS
WhatsApp Business number	CLIENT INPUT
Joinchat (or equivalent) on WordPress	REQUIRED
Reply-time standard for staff	CLIENT INPUT
Quick replies: hours, fees, directions	RECOMMENDED
WhatsApp Business API / automation	OPTIONAL

Where the WhatsApp button appears.

QUESTION THIS PAGE ANSWERS

Where will patients see WhatsApp?

Goel prototype, mobile. Hero WhatsApp + sticky bar.

Elites, live. Joinchat bubble + sticky Call / Book.

1. **Homepage hero**
   Next to Book and Call
2. **Every treatment page**
   Top + after the fees
3. **Landing pages for ads**
   Single job: book or WhatsApp
4. **Contact page**
   Beside address and map
5. **Mobile sticky bar**
   Always on screen
6. **Booking confirmation**
   "Continue on WhatsApp"

From a tap to a counted conversion.

QUESTION THIS PAGE ANSWERS

How does a WhatsApp tap get counted?

Website click
Patient taps WhatsApp

→

GTM trigger
Link URL contains wa.me

→

GA4 event
whatsapp_click + page, treatment, location

→

Key event
Marked as conversion in GA4

→

Google Ads
Imported as a conversion

Real code at Elites

```
// elitesdental.com · WPCode snippet 18950 (excerpt) · live
if (WA.test(href)) {
  send('whatsapp_click', { link_url: href, page_path, link_text });
  ads(ADS_WHATSAPP, 'wa');   // Google Ads conversion
}
// Joinchat opens WhatsApp with window.open, so that is caught too
window.open = function (url) { if (WA.test(url)) send('whatsapp_click', …) }
```

Elites sends events with `gtag` directly; Goel will use Tag Manager instead, so tags can change without editing code.

What it can and cannot tell you

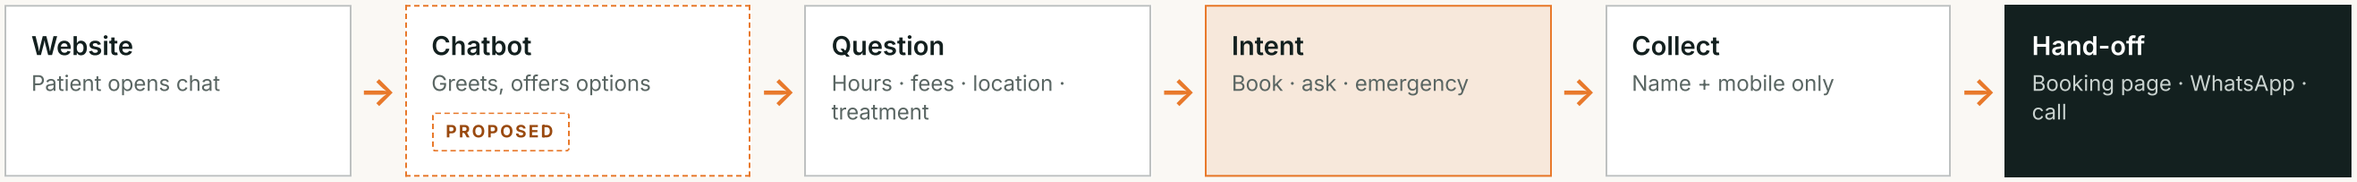

MEASURED	NOT MEASURED
The tap, page, treatment, campaign	Whether the patient actually pressed Send
Device type, time of day	What was written in the chat
Count per channel	Whether they booked, unless staff log it

That gap is why each chat carries a reference code and gets logged in the lead sheet.

A chatbot answers routine questions and hands off to a person.

QUESTION THIS PAGE ANSWERS

What would a chatbot do, and what data does it touch?

Can be tracked (website analytics)

- ✓ chatbot_open
- ✓ option chosen (e.g. 'fees')
- ✓ chatbot_handoff to WhatsApp / booking
- ✓ page it started on

Stays in the clinic's systems only

- ✓ Name and mobile number
- ✓ The chat transcript
- ✓ Anything typed about symptoms

Never sent to GA4 or ad platforms

- × Symptoms, conditions, medicines
- × Names, phone numbers, emails
- × Free-text messages

Scope: FAQ answers and routing only. No diagnosis, no treatment advice. Emergencies are told to call. Tool to be selected based on final functional requirements. OPTIONAL

17 APPOINTMENT BOOKING

The booking journey, and who can measure each step.

QUESTION THIS PAGE ANSWERS

What happens when someone books, and after?

01	02	03	04	05	06	07	08	09	10	11	12
Website	**Appointment page**	**Service**	**Date / time**	**Patient details**	**Submit**	**Confirmation**	**Clinic notified**	**Appointment**	**Visit**	**Follow-up**	**Review recall**
		Root canal, cleaning...		Name, mobile		On screen + WhatsApp	Email / dashboard				
WEBSITE	WEBSITE	WEBSITE, IF SUPPORTED	WEBSITE, IF SUPPORTED	WEBSITE, IF SUPPORTED	WEBSITE	WEBSITE	BOOKING SYSTEM	BOOKING SYSTEM	STAFF / CRM	STAFF / CRM	STAFF /

Website can measure

Page views, start, submit, confirmation. Middle steps only if the booking tool exposes them.

Booking system knows

The appointment, the slot, the doctor, cancellations.

Only staff can confirm

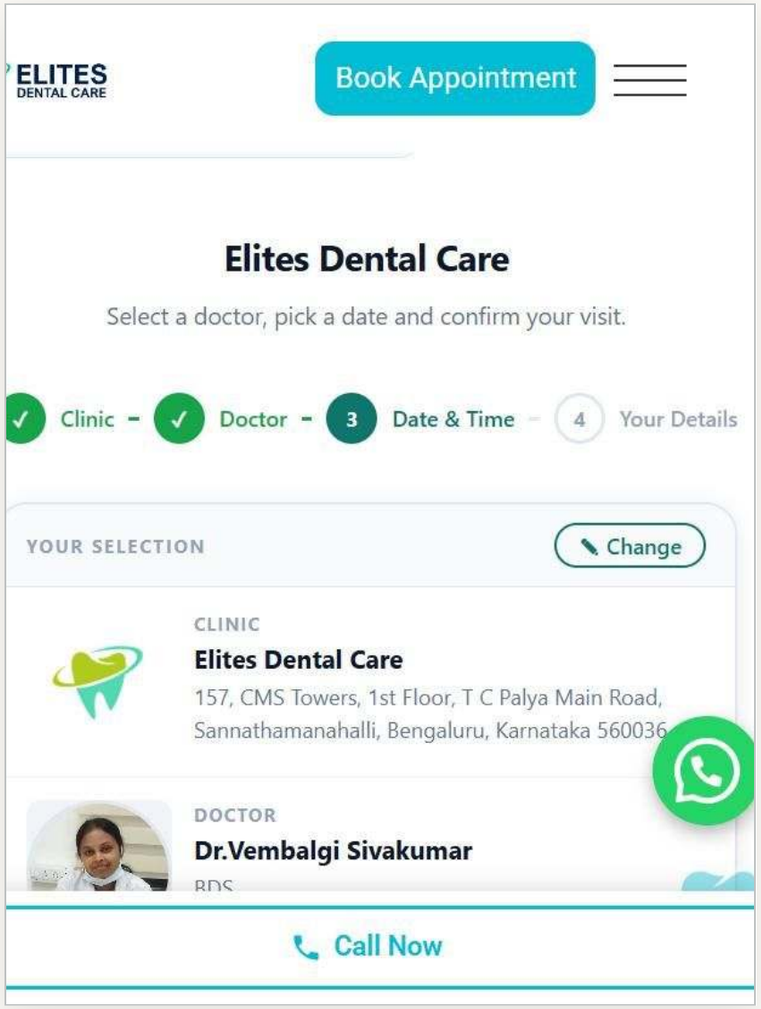

Did they arrive? Was treatment done? What was the value? Logged in the lead sheet / CRM.

Most clinics lose sight of the patient after "Submit". Steps 08–12 are where this plan connects the website to what happens in the clinic.

How booking works at Elites, and the options for Goel.

QUESTION THIS PAGE ANSWERS

Which booking system, and what can it track?

Elites, live: Click4Appointment, 4 steps: Clinic → Doctor → Date & time → Your details.

Elites Dental Care · live
Booking widget embedded on /appointment-form/
EXISTING

→

What this demonstrates
A real booking can fire a conversion only when the booking system confirms success

→

Goel Dental Care
Same principle, system to be chosen
PROPOSED

→

Technical connection
Booking API success → appointment_confirmed → GA4 + Ads

OPTION FOR GOEL	HOW IT WORKS	WHAT THE WEBSITE CAN TRACK	STATUS
A. Third-party booking widget (e.g. Click4Appointment, as Elites)	Live slots from the clinic calendar	Page view, start, confirmed booking (if the widget exposes a success signal)	CLIENT INPUT
B. WordPress booking plugin	Slots managed inside WordPress	Each step, submit, confirmation	Plugin to be selected
C. Appointment request form (prototype)	Patient picks a preferred time; front desk confirms	Start, submit, confirmation: fully trackable	EXISTING

Real detail from Elites: booking confirmation is detected by watching the booking system's own success response, then `appointment_confirmed` is sent to GA4 and a conversion to Google Ads.

Booking events, named before anything is built.

QUESTION THIS PAGE ANSWERS

Which booking steps get their own event?

booking_page_view
Booking page opened
VERIFIED

→

booking_start
First field or step touched

→

booking_step
Step 2, 3… (if supported)

→

booking_submit
Patient presses Request / Confirm

→

booking_complete
System confirms success

EVENT	OPTION A WIDGET	OPTION B PLUGIN	OPTION C REQUEST FORM	CONVERSION?
booking_page_view	Yes	Yes	Yes	No
booking_start	Depends on widget	Yes	Yes	No
booking_step	Depends on widget	Usually	Yes (prototype has steps)	No
booking_submit	Depends on widget	Yes	Yes	No
booking_complete	If success signal exists (Elites: yes)	Yes	Yes	**Yes · key event**

EXISTING

Prototype already fires these

appointment_start → appointment_step → appointment_submit → booking_confirmation, with a lead ID. Names will be aligned to this map.

REQUIRED

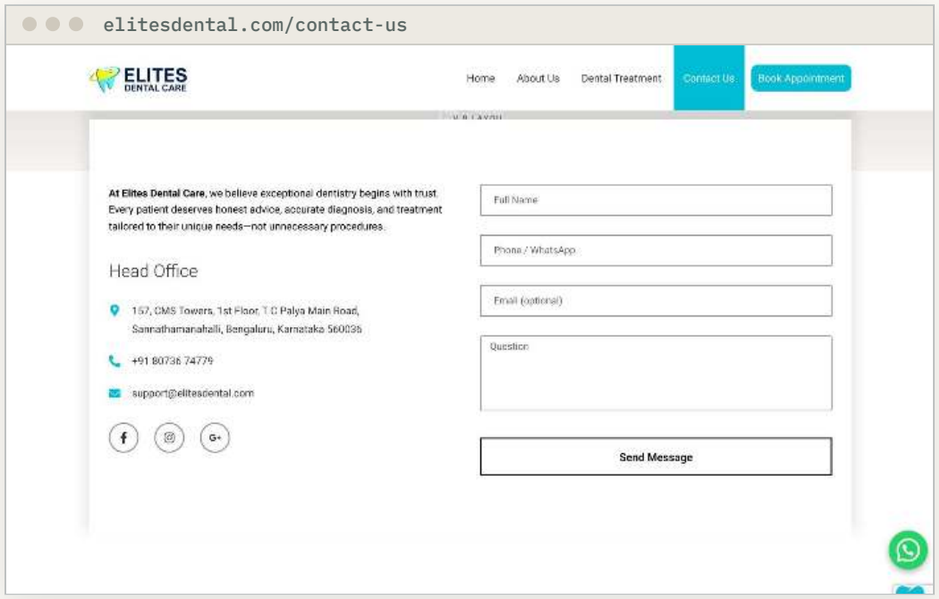

No patient data in events

Events carry the treatment category and a lead ID. Never the name, phone or symptoms.

Short forms that carry their source with them.

QUESTION THIS PAGE ANSWERS

What happens when someone fills a form?

Elites, live: Elementor Pro contact form.

Form shown → **form_start** first field → **Submit** validated → **form_submit** GA4 event → **Lead stored** with source

FIELD	SEEN BY PATIENT	GOES TO
Name	Yes	Clinic email + lead sheet
Mobile (+91, 10-digit check)	Yes	Clinic email + lead sheet
Consent tick	Yes	Lead sheet
utm_source / campaign / term	Hidden	Lead sheet only
gclid / fbclid	Hidden	Lead sheet → offline conversions
Landing page, first + last visit	Hidden	Lead sheet only

Real at Elites: a WPCode snippet adds first-touch and latest-touch source as a hidden field to every Elementor form, and a server-side relay sends each submission to the CRM.

The whole patient journey, on one page.

QUESTION THIS PAGE ANSWERS

Where does a patient come from, and where do they go?

01 · DISCOVERY	02 · WEBSITE	03 · ENGAGEMENT	04 · CONTACT	05 · CONVERSION	06 · CLINIC	07 · POST-VISIT	08 · MARKETING	09 · MEASUREMENT
Google Search	Homepage	Scroll	WhatsApp	Lead	Appointment	Follow-up	Audiences	GA4
Google Ads	Treatment page	Symptom picker	Phone call	Appointment request	Visit	Google review	Campaigns	GTM
Google Business Profile	Doctor page	FAQ open	Form	Booking confirmed	Consultation	Recall (6-month)	Retargeting where allowed	Search Console
Apple Maps	Ad landing page	CTA tap	Booking		Treatment	Repeat appointment	SEO	Google Ads
Meta Ads	Fees	Chatbot					Paid media	Lead sheet / CRM
Instagram / social	Contact						CRO	Monthly report
Referral								
Direct								

Today, Goel can see: ✓ Ad clicks · ✓ Website visits · × Which chat came from which ad · × Calls from the website · × Bookings · × Visits · × Treatment value per channel

22 PATIENT JOURNEY · MEASURED

What gets recorded at each step.

QUESTION THIS PAGE ANSWERS

How do we know which channel produced a patient?

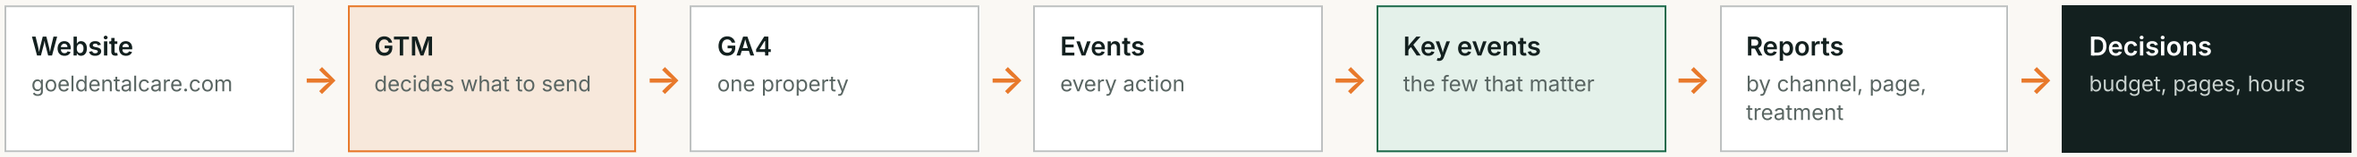

STAGE	WHAT THE PATIENT DOES	WHAT IS RECORDED	WHERE	STATUS
Discovery	Google Ads, Maps, Search, Meta, social	UTM tags · gclid · GBP insights · Apple insights	GA4 · Ads · GBP	REQUIRED
Website	Landing on a treatment page	page_view · service_view · landing page	GA4	REQUIRED
Engagement	Picker, FAQ, scroll	router_select · faq_open · scroll	GA4	RECOMMENDED
Contact	WhatsApp, call, form, booking	whatsapp_click · phone_click · form_submit · booking_complete	GA4 → Ads	REQUIRED
Lead	Front desk replies	Lead row with source + ref code + first-reply time	Lead sheet / CRM	REQUIRED
Appointment	Slot confirmed	Status: Booked	CRM / booking system	REQUIRED
Visit + treatment	Patient comes in	Status: Came · Treated · ₹ value (no clinical notes)	CRM	RECOMMENDED
Post-visit	Review + recall	Review link sent · recall date	CRM · GBP	RECOMMENDED
Back to marketing	Spend follows results	Offline conversions to Google Ads	Ads	RECOMMENDED

The point: each row passes the same reference code and source forward, so a treated patient can be traced back to the search, ad or map listing that started it.

How GA4 turns visits into decisions.

QUESTION THIS PAGE ANSWERS

What does GA4 actually do here?

Events (counted, not conversions)

EVENT	WHEN
page_view	Every page
service_view	Treatment page opened
cta_click	Any Book / Call / WhatsApp button
faq_open	A question expanded
booking_start	Booking begun
directions_click	Maps link tapped

Key events (conversions)

KEY EVENT	WHY IT MATTERS
whatsapp_click	Patient chose to message
phone_click	Patient chose to call
form_submit	Call-back requested
booking_complete	Appointment confirmed

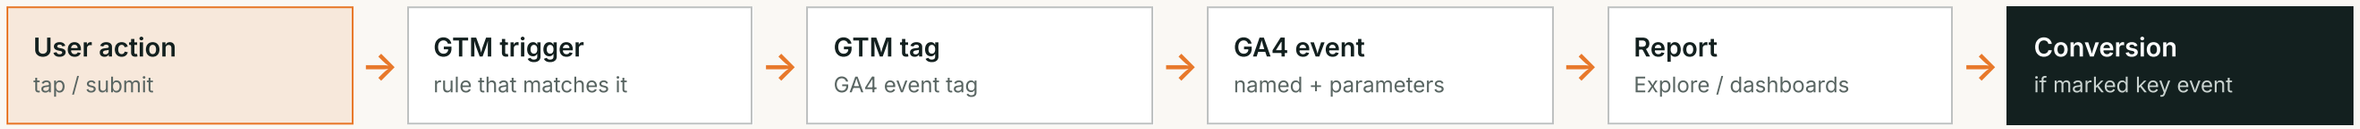

Landing pages are a GA4 **report dimension**, not a separate event; no extra tag needed.

Today at Goel: two different GA4 IDs on the site. One property will be kept.

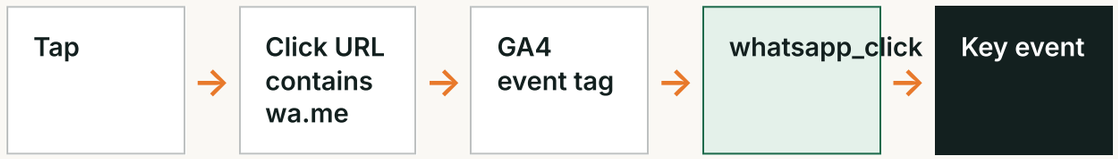

How Tag Manager sends each action to GA4.

QUESTION THIS PAGE ANSWERS

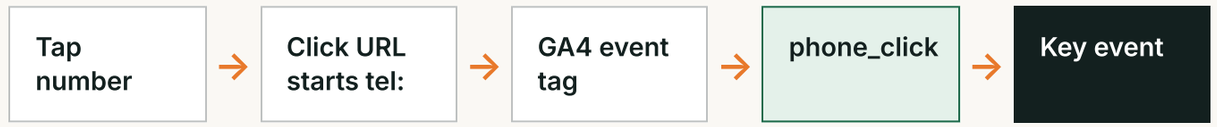

How does GTM send the event to GA4?

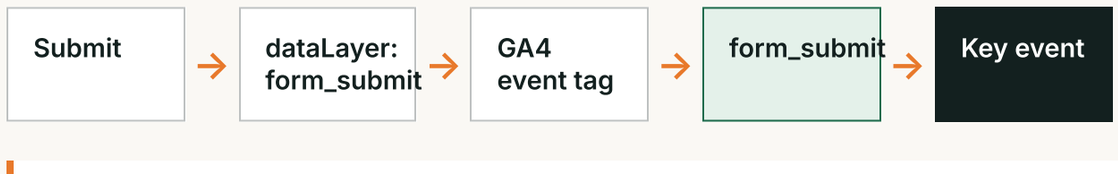

WhatsApp button

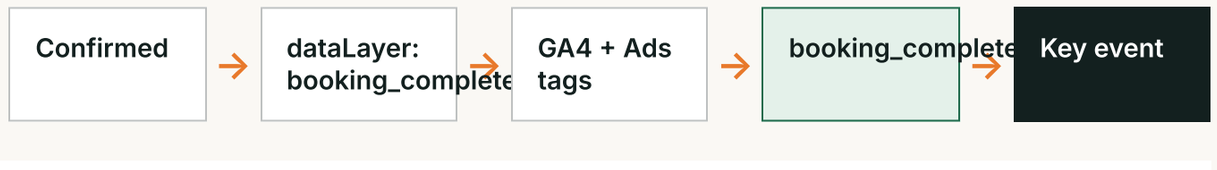

Phone

Form

Booking

Chatbot: only if the chosen tool emits browser events (open / hand-off). If it doesn't, it is not tracked and the report says so.

Every tracked action, in one table.

QUESTION THIS PAGE ANSWERS

What exactly is tracked?

USER ACTION	EVENT NAME	TRIGGER	TOOL	DESTINATION	CONVERSION?	BUSINESS MEANING
WhatsApp tap	whatsapp_click	Click URL matches wa.me / api.whatsapp	GTM	GA4 → Google Ads	**Yes**	Patient chose to message
Phone tap	phone_click	Click URL starts tel:	GTM	GA4 → Google Ads	**Yes**	Patient chose to call (not proof the call connected)
Contact / call-back form	form_submit	dataLayer push on valid submit	GTM	GA4 → Ads; lead sheet	**Yes**	Named lead with source
Booking opened	booking_start	First interaction on booking page	GTM	GA4	No	Intent; finds drop-off
Booking confirmed	booking_complete	Booking system success signal	GTM / snippet	GA4 → Ads; CRM	**Yes**	Appointment requested
Landing page	(dimension)	Built into GA4	GA4	GA4	No	Which page brings leads
Treatment page	service_view	Page type = treatment	GTM	GA4	No	Interest by treatment
Any CTA	cta_click	Elements with data-cta	GTM	GA4	No	Which button positions work
Directions	directions_click	Maps link	GTM	GA4	Optional	Visit intent
Chatbot	chatbot_open / chatbot_handoff	Only if the tool exposes events	GTM	GA4	Optional	Self-service questions
Visit / treatment	appointment_completed / treatment_completed	Staff update in CRM	CRM	Offline import to Ads	Later	Actual patients and value

No event is claimed unless the final tool supports it. Names are final before build so reports stay comparable over time.

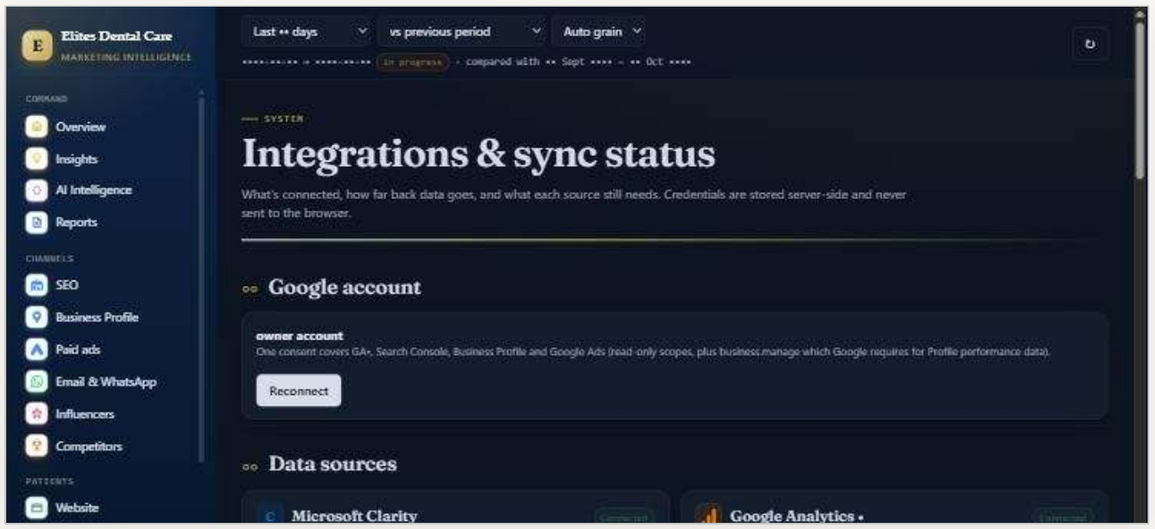

What tracking looks like when it's connected.

QUESTION THIS PAGE ANSWERS

Has this tracking been set up somewhere real?

Elites dashboard → Website: GA4 traffic + lead actions. Figures blurred.

Integrations: GA4, Clarity, Search Console, Ads, Business Profile connected.

Elites Dental Care · live
GA4 + Clarity + click events feeding one dashboard
EXISTING

→

What this demonstrates
Website actions can be counted daily by channel

→

Goel Dental Care
Same events, through GTM
PROPOSED

→

Technical connection
Tag → GA4 → dashboard → weekly decision

A real lesson, visible on the screenshot: "No GA4 key events are marked in this property." Events were firing, but GA4 wasn't told which ones count as conversions. For Goel, marking key events is a launch checklist item (p. 39).

LIVE TRACKING SNIPPETS AT ELITES (WPCODE LIST, 10 NOV)	PLACED
Tracking: GA4 + Google Ads click conversions (phone, WhatsApp, directions, book)	Site-wide footer
C4A appointment conversion tracking	Site-wide header
Dashboard: attribution capture + booking relay	Site-wide footer
Dashboard: lead relay (forms + bookings to CRM)	Server-side
Tracking: Microsoft Clarity (strict masking)	Site-wide header
SEO: Dentist LocalBusiness schema	Home, contact, about
UX: mobile sticky Call / Book bar	Site-wide footer

Which channel produced the enquiry.

QUESTION THIS PAGE ANSWERS

How do we know which marketing channel generated the enquiry?

Google Ads	Meta Ads	Organic search	Business Profile	Apple Maps	Social	Referral	Direct
gclid + utm	fbclid + utm	referrer	utm_source=gbp	utm_source=apple_maps	utm	referrer	none

↓

Website — source captured on arrival → **Landing page** — first page seen → **Patient action** — WhatsApp · call · form · booking → **Lead / appointment** — source written into the lead → **Tracking** — GA4 + Ads + lead sheet → **Marketing report** — leads, bookings, patients by channel

UTM tag, explained

```
goeldentalcare.com/root-canal-treatment/?utm_source=google&utm_medium=cpc&utm_campaign=rct-malviya-nagar&utm_term=root canal cost
```

utm_source

Who sent the visit: google, meta, gbp

utm_medium

Type: cpc, organic, social

utm_campaign

Which campaign

utm_term

Which keyword (search ads)

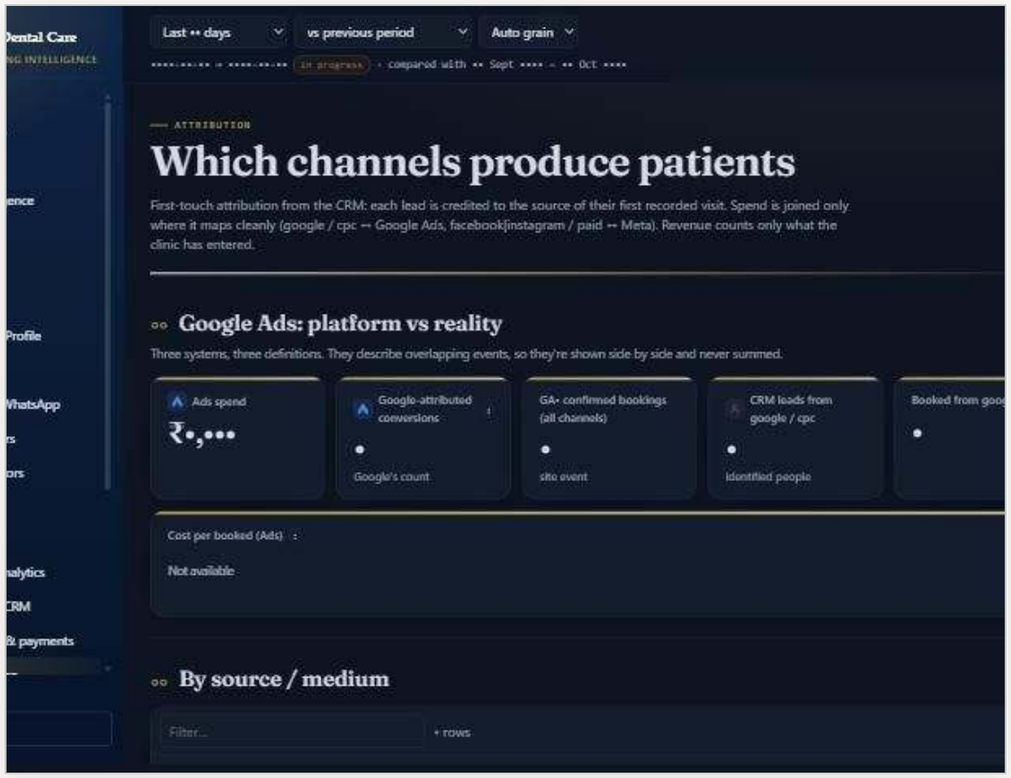

What attribution can't see, stated up front.

QUESTION THIS PAGE ANSWERS

Will tracking be perfect?

LIMITATION	EFFECT	HOW WE REDUCE IT
Patients use several channels	Credit goes to first or last touch, not both	Store first and latest touch on every lead
Cookie consent declined	Visit not attributed	Consent-aware tags; lead form still records source
Safari / iOS privacy features	Some click IDs removed, cookies shortened	First-party lead capture; UTMs on every link we control
Phone calls from Google Maps	Happen outside the website	GBP call insights; call tracking number (optional)
Word of mother	Shows as Direct	Front desk asks 'how did you hear about us?'
Platform counts differ	GA4, Ads and CRM disagree	Shown side by side, never added together

No promise of perfect attribution. The aim is enough accuracy to move budget toward what produces booked patients.

Elites dashboard → Attribution: 'Google Ads: platform vs reality' shows Ads' own count, GA4 bookings and CRM leads separately. Figures blurred.

From a well-built page to a patient found on Google.

QUESTION THIS PAGE ANSWERS

How does the website get found on Google?

Website clean pages, one H1 → **Technical SEO** speed, sitemap, schema → **Search Console** submitted + verified → **Indexing** pages accepted → **Visibility** impressions on Google → **Organic traffic** clicks → **Landing page** treatment page → **Conversion** WhatsApp · call · booking

- [ ] Sitemap submitted (XML, auto-updated)
- [ ] Indexing checked page by page
- [ ] Meta title + description per page
- [ ] One H1, logical H2s
- [ ] Internal links: treatments ↔ doctors ↔ fees
- [ ] Images compressed, named, with alt text
- [ ] Schema on home, treatments, doctors
- [ ] Local SEO: NAP identical everywhere
- [ ] 301 redirects for ~60 old .html URLs
- [ ] No doorway pages for every suburb

Elites dashboard → SEO: Search Console clicks, impressions, CTR, position, daily. Figures blurred.

One page, done properly.

QUESTION THIS PAGE ANSWERS

What does good on-page SEO look like?

ELEMENT	GOEL ROOT CANAL PAGE (PLANNED)
URL	/root-canal-treatment/
Title	Root Canal Treatment in Malviya Nagar | Goel Dental
Meta description	Root canal by an endodontist in Malviya Nagar. Single-sitting and microscope options. Fees published.
H1	Root canal treatment in Malviya Nagar
H2s	Signs · Process · Pain · Aftercare · Cost · Doctor · FAQ
Primary keyword	root canal malviya nagar
Internal links	Emergency · Crowns · Dr Shikha Goel · Fees
Image alt	"Dr Shikha Goel using the dental microscope"
Schema	MedicalProcedure + FAQPage + BreadcrumbList

Today on goeldentalcare.com (verified)

- × H1: "Goel Dental|Best Dental Clinic in South Delhi"
- × 28 of 30 homepage images have no alt text
- × 136 scripts on the homepage
- × No Dentist schema

VERIFIED

Evidence the clinic's searches support it

In the clinic's own Google Ads history, searches containing **"malviya nagar"** converted at 2–3%; **"with fees"** at 3.1%. Pages are built around those searches.

Not promised

Rankings depend on Google and competitors. This builds the foundation and measures progress in Search Console.

Telling Google exactly what the clinic is.

QUESTION THIS PAGE ANSWERS

What is schema, and which types are used?

Website
page content

→

Structured data
JSON-LD in the page

→

Search engines
understand name, address, hours, services

Real example at Elites

```
// Live on elitesdental.com (excerpt) · added via WPCode
{
  "@type": "Dentist",

}
```

Planned for Goel

SCHEMA TYPE	WHERE	STATUS
Dentist (LocalBusiness)	Home, contact	REQUIRED
MedicalProcedure	Each treatment page	REQUIRED
Person (doctor)	Doctor pages	RECOMMENDED
BreadcrumbList	All inner pages	REQUIRED
FAQPage	Pages with real FAQs	OPTIONAL

Only facts the clinic confirms go into schema. FAQ rich results are limited by Google to authoritative health and government sites, so FAQ markup is for clarity, not a guaranteed display.

CLIENT INPUT Exact floor, hours (incl. Sunday), map coordinates, registration numbers.

The clinic's listing on Google Search and Maps.

QUESTION THIS PAGE ANSWERS

How does the website connect to Google Maps?

Goel Dental the clinic → **Business Profile** verified listing → **Google Search** local results → **Google Maps** map pack → **Website** UTM-tagged link → **Call · Directions · Website · Book**

PROFILE ITEM	TODAY (VERIFIED)	ACTION
Business name	Goel Dental	Keep identical everywhere
Address	"Lower Ground" on GBP vs "Ground Floor" on site	One version CLIENT INPUT
Phone	88269 48621 on GBP; 93102 07552 on site	One primary number CLIENT INPUT
Hours	Friday differs across listings	One schedule + holidays
Website link	No tracking	? utm_source=gbp&utm_medium=organic
Services	—	Mirror the treatment pages
Photos	—	Real clinic photos, monthly
Reviews	4.8★ · 708	Ask every patient; reply to all

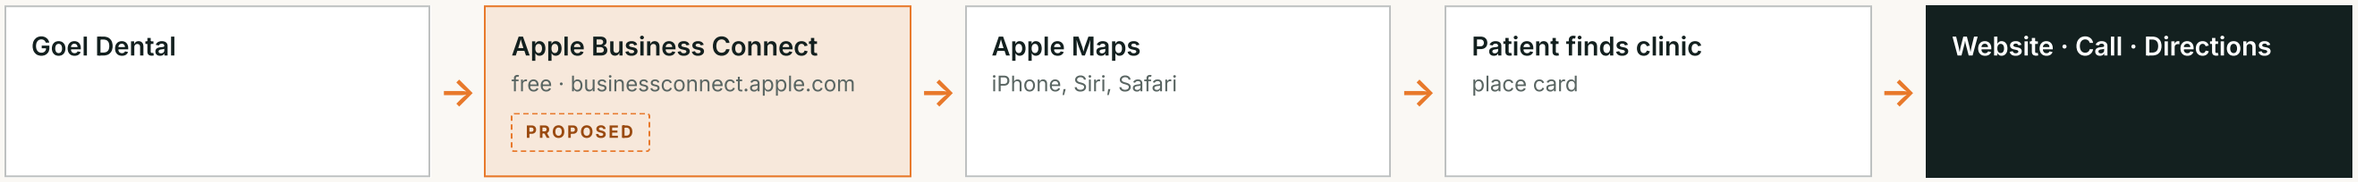

Elites dashboard → Business Profile: views, calls, direction requests, website clicks. Figures blurred.

The same clinic, listed properly on Apple Maps.

QUESTION THIS PAGE ANSWERS

How does the website connect to Apple Maps, and what can we see?

Profile setup

- [ ] Business name (identical to Google)
- [ ] Address + exact map pin
- [ ] Phone
- [ ] Website (UTM: utm_source=apple_maps)
- [ ] Hours incl. holidays
- [ ] Category: Dentist
- [ ] Photos + logo
- [ ] Verification by Apple

Apple Maps visibility ≠ a list of Apple users

We **cannot** get Apple IDs, personal accounts, names or a list of people who viewed the clinic. Apple does not share this, and we would not ask.

What is available

- ✓ Apple's own aggregate insights in Business Connect (e.g. views, taps for directions, calls, website)
- ✓ Visits arriving with utm_source=apple_maps, counted in GA4
- ✓ Enquiries from those visits, counted like any other channel

What analytics can measure on iPhones and Android phones.

QUESTION THIS PAGE ANSWERS

What can we track from iOS users?

iOS / iPhone

- Device category, OS, browser: aggregate
- Sessions, pages, events
- Conversions on the website, where measurable
- Share of traffic and leads by device

Android

- Device category, OS, browser: aggregate
- Sessions, pages, events
- Conversions on the website, where measurable
- Share of traffic and leads by device

Safari privacy (iOS + Mac)

Shortens how long script-set cookies last, and in some contexts (e.g. Private Browsing, links from Mail and Messages) removes ad click IDs from links. Some return visits look new.

App tracking permission (iOS)

Inside apps like Instagram, users can refuse tracking. Meta reports become modelled estimates.

What we never do

Identify individual people, fingerprint devices, or link analytics to a named patient. Reports are counts and trends.

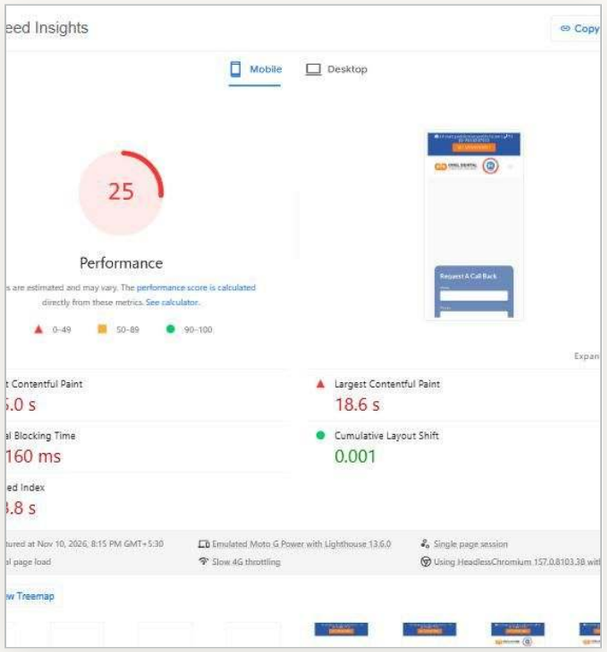

Practical result: compare iOS vs Android **share** of visits and enquiries, not individual journeys.

How speed is tested, fixed and re-tested.

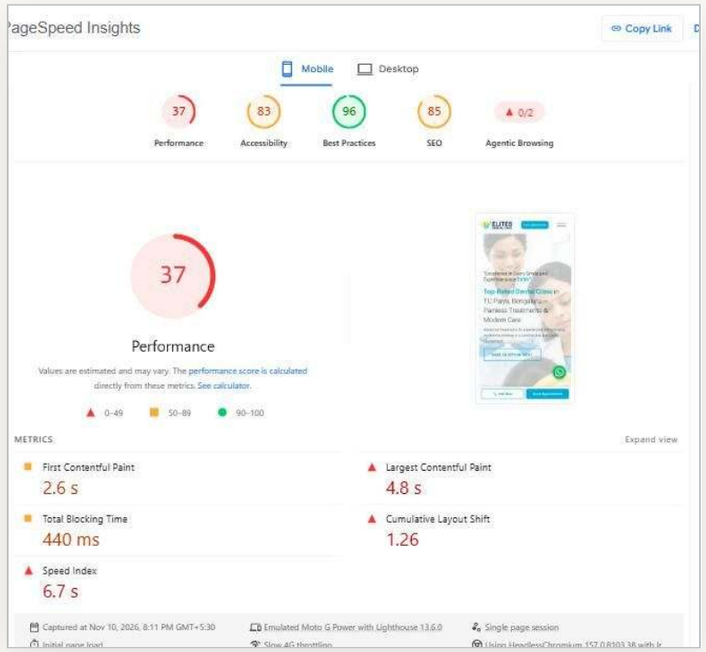

QUESTION THIS PAGE ANSWERS

How do we test page speed?

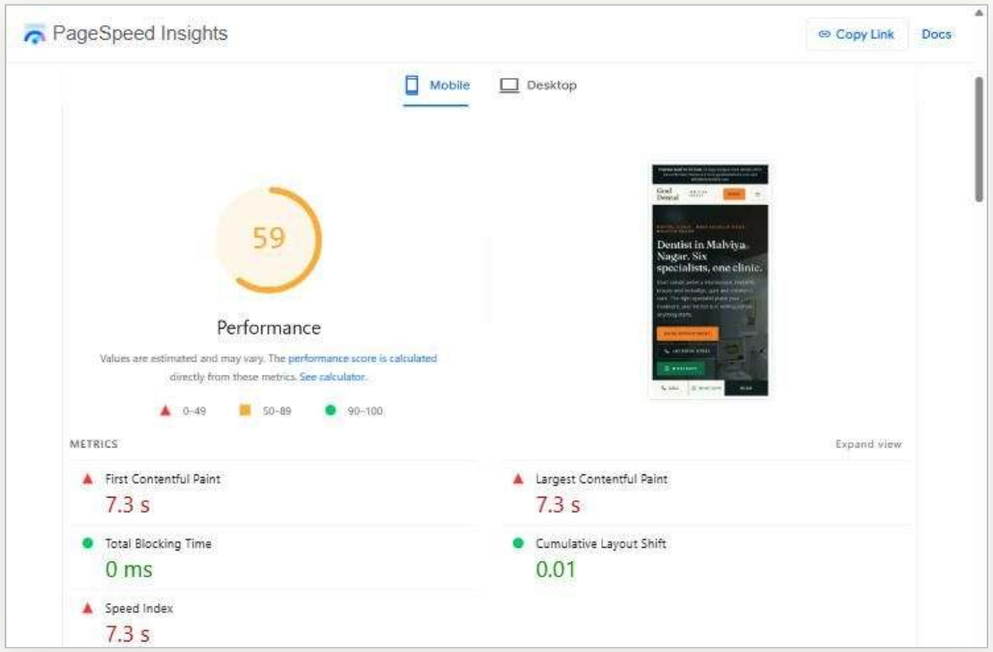

Website → **PageSpeed / Lighthouse** free Google tools → **Mobile** slow 4G test → **Desktop** → **Core Web Vitals** LCP · INP · CLS → **Issues** listed by impact → **Optimise** → **Retest** after every change

goeldentalcare.com today · mobile: 25. FCP 15.0 s, LCP 18.6 s, TBT 4,160 ms.

elitesdental.com · mobile: 37. LCP 4.8 s, CLS 1.26. A live WordPress site still needs tuning.

Goel prototype · mobile: 59. TBT 0 ms, CLS 0.01. Single preview file with photos embedded; production serves them separately.

LCP · INP · CLS · Images · Caching · CSS · JavaScript · Fonts · Plugins · Server · 3rd-party

Three numbers Google uses for page experience.

QUESTION THIS PAGE ANSWERS

What are Core Web Vitals, in plain words?

LCP

Loading

How long until the main image or heading appears. Good: under 2.5 s.

Goel today: 18.6 s (lab test)

INP

Responsiveness

How quickly the page reacts to a tap. Good: under 200 ms. Needs real-user data.

Goel today: Not enough real-user data yet

CLS

Stability

How much the page jumps while loading. Good: under 0.1.

Goel today: 0.001 (lab test)

Test
PageSpeed + Search Console report

→

Identify
largest images, blocking scripts, layout shifts

→

Optimise
compress, cache, defer, reserve space

→

Retest
same tool, same page

No specific PageSpeed score is promised. Each fix is measured before and after, on the same tool.

Keeping the site safe and recoverable.

QUESTION THIS PAGE ANSWERS

What if the site breaks or gets hacked?

Website → **SSL** https on every page → **Security** firewall, login limits, 2FA → **Backups** daily, off-site → **Updates** core, theme, plugins → **Monitoring** uptime + errors → **Recovery** restore tested

REQUIRED

Initial implementation (in website project)

- ✓ SSL certificate + https redirects
- ✓ Admin accounts: named users, strong passwords, 2FA
- ✓ Security plugin / host firewall configured
- ✓ Backups scheduled + one restore test
- ✓ Unused plugins and themes removed
- ✓ Form spam protection

RECOMMENDED

Ongoing maintenance (after launch)

- ✓ Monthly updates with backup first
- ✓ Uptime monitoring
- ✓ Plugin licence renewals
- ✓ Quarterly restore test
- ✓ User access review

How the site goes live.

QUESTION THIS PAGE ANSWERS
What happens on deployment day?

Actual today

GitHub repository — dannygrowthmarketing/goel-dental

↓

Push to main

↓

GitHub Pages builds — automatic

↓

Preview URL — noindex

EXISTING Working now. Firebase / Vercel are not used and not needed.

Reference: Elites

WordPress on Hostinger — inferred from installed Hostinger plugins

↓

Domain elitesdental.com

↓

LiteSpeed Cache

Proposed for Goel

GitHub — design + tracking code

↓

Staging WordPress — private review copy

↓

QA sign-off — checklist p. 39

↓

Production host — managed WordPress CLIENT INPUT

↓

Domain + DNS — goeldentalcare.com

↓

301 redirects — old .html → new pages

↓

Live website — sitemap to Search Console

The launch checklist. Nothing goes live until every box is ticked.

QUESTION THIS PAGE ANSWERS

How do we know everything works?

Devices

- [ ] Mobile (Android + iPhone)
- [ ] Desktop
- [ ] Chrome · Safari · Edge · Firefox

Contact

- [ ] Forms send + arrive
- [ ] WhatsApp opens with text
- [ ] Phone taps dial
- [ ] Booking end to end
- [ ] Chatbot hand-off

Tracking

- [ ] GTM preview: every tag
- [ ] GA4 DebugView: every event
- [ ] Key events marked
- [ ] Google Ads conversions received
- [ ] Search Console verified

SEO

- [ ] Titles + descriptions
- [ ] Schema validated
- [ ] Sitemap + robots
- [ ] 301 redirects
- [ ] No broken links

Quality

- [ ] PageSpeed mobile + desktop
- [ ] Core Web Vitals
- [ ] SSL everywhere
- [ ] Images compressed
- [ ] Accessibility basics

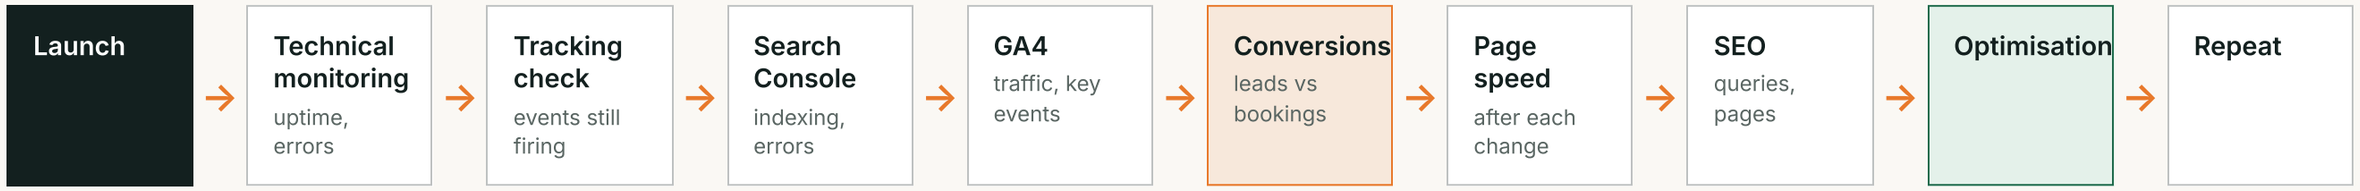

Tracking validation: 10 test enquiries per channel (WhatsApp, call, form, booking) are made before launch and matched in GA4, Google Ads and the lead sheet. Test leads are flagged and excluded from reports.

40 POST-LAUNCH

What is watched after launch.

QUESTION THIS PAGE ANSWERS

What do we monitor after launch?

REQUIRED

Launch work · part of the website project

- First 30 days: daily tracking check, weekly speed check
- Fix anything found in Search Console coverage
- Confirm redirects caught old URLs
- Hand-over: logins, plugin list, how to edit pages
- One training session for the front desk (lead sheet + WhatsApp)

OPTIONAL

Ongoing marketing work · separate scope

- Google Ads management and new landing pages
- Monthly report: channels → leads → bookings → patients
- SEO content and Business Profile posts
- Conversion-rate tests on key pages
- Meta campaigns when approved

Three kinds of data, kept apart.

QUESTION THIS PAGE ANSWERS

What data should NOT be sent to analytics?

Marketing → Website → Aggregate analytics → Lead → Booking → **Clinic system** → Patient interaction → Follow-up → Review → Retention

ANONYMOUS / AGGREGATE

Analytics data

- Page views, clicks, device type
- Channel, campaign, keyword
- Event counts

Lives in: GA4 · Google Ads · Search Console

NAME + CONTACT

Patient-identifiable

- Name, mobile, email
- Preferred time
- Source + reference code

Lives in: Lead sheet / CRM · clinic email · booking system

TREATMENT RECORDS

Clinical / medical

- Diagnosis, X-rays, notes
- Medical history
- Treatment plans

Lives in: Clinic's practice software only

Rule: no names, phone numbers, emails, symptoms or treatment details are ever sent to GA4, Google Ads or Meta. Leads go to the clinic's systems with consent; access is limited to named staff. Privacy text to be reviewed under the DPDP Act 2023.

Every tool in the system, on one map.

QUESTION THIS PAGE ANSWERS

What is the complete technology stack?

WEBSITE

GitHub	EXISTING
WordPress	REQUIRED
Managed hosting	REQUIRED

COMMUNICATION

WhatsApp Business	REQUIRED
Joinchat	REQUIRED
Chatbot	OPTIONAL
Clinic email (SMTP)	REQUIRED

BOOKING

Booking system	REQUIRED
Request form	EXISTING

ANALYTICS

GA4	EXISTING
Microsoft Clarity	OPTIONAL

TRACKING

Google Tag Manager	REQUIRED
Google Ads conversions	REQUIRED

SEO

Search Console	REQUIRED
Yoast SEO	REQUIRED
Schema	REQUIRED

LOCAL DISCOVERY

Google Business Profile	EXISTING
Apple Business Connect	RECOMMENDED

PERFORMANCE

PageSpeed / Lighthouse	REQUIRED
Caching	REQUIRED
Image compression	REQUIRED

MARKETING

Google Ads account	EXISTING
Meta Ads	OPTIONAL
SEO content	RECOMMENDED

DATA

Lead sheet / CRM	RECOMMENDED
Monthly reporting	RECOMMENDED

EXISTING for Goel: the GitHub prototype, a GA4 property (to be consolidated), the Google Ads account, the Google Business Profile.

Three separate buckets, so nothing is hidden.

QUESTION THIS PAGE ANSWERS

What am I paying for, and what is paid elsewhere?

ONE-TIME · IMPLEMENTATION FEE

Core implementation

- Website (WordPress build from the prototype)
- WordPress setup + plugins configured
- Integrations: WhatsApp, booking, forms
- Analytics: GTM + GA4 + Ads conversions
- SEO: technical, on-page, schema, redirects
- Local: GBP clean-up + Apple Business Connect
- Performance optimisation
- QA + deployment + 30-day launch support

Fee as quoted separately.

PAID TO PROVIDERS

Third-party costs

- Hosting (annual)
- Domain renewal
- Premium plugins (e.g. page builder licence)
- Booking subscription (if Option A)
- Chatbot (if chosen)
- WhatsApp Business API (only if automated)
- Call tracking (optional)

Paid by the clinic directly. Each price confirmed before purchase; none assumed here.

MONTHLY · OPTIONAL

Ongoing

- SEO content + GBP
- Paid media management
- Conversion-rate optimisation
- Analytics + monthly reporting
- Maintenance + updates

Separate from the website. Ad spend is always paid by the clinic directly to Google / Meta.

Built and running at Elites, adapted for Goel.

QUESTION THIS PAGE ANSWERS

What has actually been implemented elsewhere?

IMPLEMENTED AT ELITES (VERIFIED 10 NOV 2026)	TECHNICAL PURPOSE	HOW GOEL ADAPTS IT
Mobile sticky Call / Book bar (WPCode)	Contact always one tap away	Call · WhatsApp · Book, on every page
Joinchat WhatsApp button	Message the clinic from any page	Prefilled text with treatment + reference code
GA4 + Ads click conversions (phone, WhatsApp, directions, book)	Counts each contact action	Same events, managed in GTM
Click4Appointment booking + success-response tracking	Only real bookings count as conversions	Booking option chosen; same success rule
Attribution cookie + hidden fields on forms	Every lead keeps first and latest source	Same, plus gclid/fbclid for offline conversions
Server-side lead relay to CRM (HMAC-signed)	Leads land in one list automatically	Lead sheet or CRM, chosen with clinic
Dentist schema snippet	Google reads name, address, hours, specialties	Dentist + MedicalProcedure + Person
Noindex for payment / test URLs	Keeps junk out of Google	Same at launch
Microsoft Clarity with strict masking	See where visitors get stuck, without capturing typed data	Optional
Marketing dashboard (GA4, GSC, Ads, GBP, CRM)	One view of the patient funnel	Monthly report first; dashboard optional

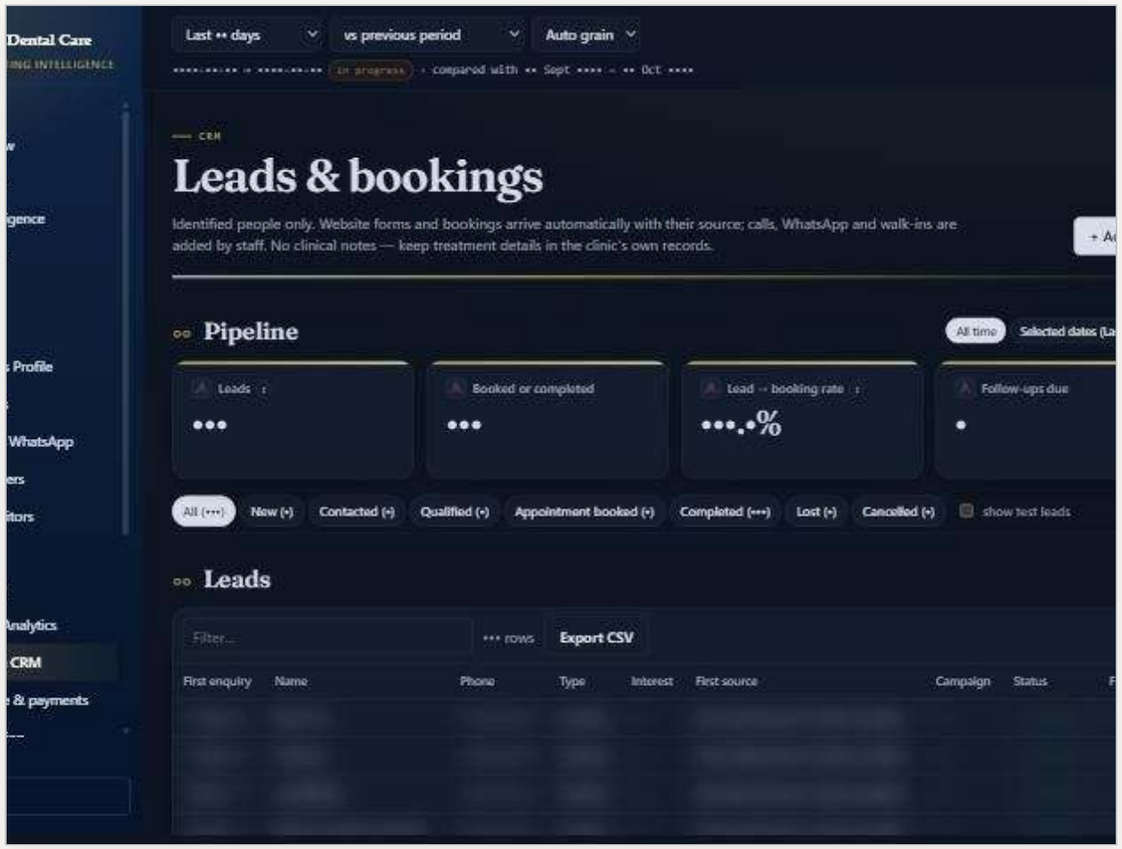

Where the website's data ends up.

QUESTION THIS PAGE ANSWERS

What does the clinic get to see?

Funnel analytics: seen on Google → clicked → visited → engaged → lead action → booked → CRM → appointment → visit → payment.

Leads & bookings: every enquiry with its first source; staff add calls, WhatsApp and walk-ins. No clinical notes.

What this demonstrates: the website is the start of the measurement chain, not the end. Elites' dashboard shows a real gap (bookings not yet reaching the CRM), the kind of break this setup is designed to expose. Figures and names blurred to protect that clinic's data.

One connected system, end to end.

QUESTION THIS PAGE ANSWERS

How does it all fit together?

01 Marketing channels	02 Patient discovery	03 Goel Dental website	04 Engagement	05 WhatsApp · Call · Chatbot · Form	06 Booking	07 Appointment
08 Clinic	09 Treatment	10 Follow-up	11 Review / recall	12 Data & analytics	13 Marketing optimisation	14 Better patient experience

Patients

Find the clinic, understand treatment and fees, contact it in one tap.

Clinic

Every enquiry in one list, with where it came from.

Marketing

Spend moves to what produces booked patients.

GOEL DENTAL CARE · IN ONE SENTENCE

This is not simply a website development project.

It is a connected digital system that helps patients discover the clinic, understand its services, contact it, request or book appointments, and lets the clinic measure and improve every step of that journey.

Build · Connect · Track · Test · Deploy · Monitor

Daniel Deepak · Performance marketing & growth
